

PLACEMENT CELL MANAGEMENT SYSTEM

GOAL - To Optimize NSEC's Placement Ecosystem

1. About the Project

Current Scenario:

- NSEC has built a strong foundation for student placements through dedicated TPO efforts and student PR systems.
- The current placement process at NSEC relies on manual, disconnected systems that create bottlenecks for students and TPOs.
- The placement process in our college is **highly disorganized**, leading to **missed opportunities** for students and **administrative inefficiencies** for TPOs (Training & Placement Officers). The lack of a **centralized digital system** results in:
 1. **Students** submitting poor-quality resumes and missing job deadlines.
 2. Inefficient Communication Chain
 - PR system creates information bottlenecks
 - Critical drives sometimes miss eligible candidates
 3. **TPOs** wasting hours on manual coordination and paperwork/ TPOs wasting time on administrative tasks instead of strategic work.
 4. Modernize NOC Process
 5. **Strengthen Data Utilization**
 - Current Practice: Detailed placement records maintained
 - Next Step: Real-time analytics to highlight NSEC's strengths to recruiters
 6. Lack of Transparency

Why Act Now?

- **Builds on NSEC's existing placement success**
- **Aligns with NSEC's progressive vision**
- **Recognizes existing strengths**
- **Addresses student concerns without overburdening TPOs/PRs**
- **Positions NSEC as a tech-savvy institution**
- **Minimal disruption - integrates with current processes**

This document highlights **specific pain points** and proposes a **tech-driven solution**.

2. Problems Faced by TPOs

1. Manual Notification Hassles/Managing PR for Notification

Problem:

- TPOs must first brief PRs, who then relay information to students → creating a broken telephone effect
- Critical details often get diluted or delayed in this multi-layer communication
- **Example:**
TPO sent drive details to 12 department PRs via WhatsApp and 3 PRs forgot to forward to their batches

2. Resume Screening Crisis → No Resume Screening Tool

Problem:

- TPOs manually review **500+ resumes per drive** with **no standardized screening**
- May Unable to Recognize Existing Talent in college
- **Human errors** cause deserving candidates to be overlooked
- **Example:**
A deserving student was **accidentally overlooked** for Amazon because her resume was misplaced in a pile.

3. No Placement Analytics

Problem:

- TPOs maintain Excel sheets for placement records, making trend analysis impossible.
- Lacks real-time reports on placement trends.
- **Example:**
“ The college couldn’t identify why **only 30% of ME students** got placed despite good grades (later found: resume skills gap).”

4. Lack of Transparency

- **Problem:** Students can’t track application status or TPO responses.
- **Example:** “*Students unable to track applications like Swiggy orders (Submitted → Under Review → Shortlisted).*”

3. Problems Faced by Students

1. Poor Resume Quality → Rejections

- **Problem:** Students submit resumes with formatting errors, missing skills, or irrelevant content, leading to automatic rejections by companies.
- **Example:**
A CSE student applied to 8 companies but got rejected by all because his resume:
 - Had inconsistent fonts
 - Lacked quantifiable achievements
 - Was not ATS (Applicant Tracking System) friendly

2. Missed Job Notifications

- **Problem:** Placement notices are shared via WhatsApp/email, causing students to miss critical deadlines.
- **Example:** “A student missed the **recruitment drive** because the WhatsApp message got buried under other chats.”

3. Slow & Opaque NOC Process

- **Problem:** Students submit physical NOC forms and wait days for approval with no tracking.
- **Example:**
“A Student had to visit the TPO office **5 times** to get his Microsoft internship NOC approved due to lost paperwork.”

4. Other Problems/Administrative(will be handle by Admin)

1.Broken Hackathon Management

- **Problem:** Events run via posters/emails → 80% lower participation than potential.
- **Example:**
“CodeStorm 2023: Only 22/120 CSE students participated despite ₹50K prizes (emails lost in spam).”

2.Untracked Student Requests

- **Problem:** Queries get lost across WhatsApp/email → No accountability.
- **Example:**
“NOC Query: 15+ students emailed the same question daily for a week with no reply.”

3.Manual Student Management

- **Problem:** Admins use paper-based systems for:
 - TPO assignments
 - Student blocking (academic misconduct)
 - Resume access log
- **Example:**
“Placement Ban: A blocked student (due to attendance) applied to 3 companies before admins noticed”

5. How Our Solution Solves These Problems

Solutions to TPO Challenges

Problem	Digital Solution	Implementation	Outcome
Manual Notifications	Automated bulk messaging system	• Pre-designed notification templates • Batch selection by branch/year/CGPA • Integrated SMS/Email/App push notifications	Saves 15+ hours/week of TPO time
No Resume Screening	AI-powered dashboard	• Automatic ATS compatibility scoring • Skill gap analysis with improvement suggestions • One-click shortlisting interface	Reduces resume screening errors by 70%
No Placement Analytics	Real-time analytics portal	• Interactive dashboards with filters • Company-wise placement trends • Department performance comparisons	Identifies skill gaps (e.g., "ME students need SQL training")
Lack of Transparency	Student application tracker	• Live status updates (Submitted → Under Review → Shortlisted) • TPO response timeline with read receipts	Reduces student follow-up queries by 90%

Solutions for Student Placement Challenges

Problem	Digital Solution	Implementation	Outcome
Poor Resume Quality	AI-Powered Resume Builder	• Real-time ATS scoring (0-100) • Auto-formatting • Skill gap analysis • Industry-specific templates	75% reduction in resume rejections
Missed Notifications	Centralized Alert System	• Push notifications + SMS • Calendar integration • Priority tagging • Read receipts	100% drive participation
Slow NOC Process	Digital NOC Portal	• Online submission • Status tracker • Document upload • TPO chat support	NOC approval in <24 hours

Solutions for Administrative Challenges

Problem	Digital Solution	Key Features	Expected Outcome
Broken Hackathon Management	Centralized Event Platform	• Automated registration • Reminder system (SMS/email/app) • Live participation dashboard	Increase participation of Students
Untracked Student Requests	Ticketing System	• Query categorization • Assignment to TPOs • SLA monitoring • Knowledge base	Reduce duplicate queries by 90%
Manual Student Management	Digital Control Panel	• One-click student blocking • TPO assignment module • Access audit trails	100% policy enforcement

6. WORKFLOW (FUNCTIONALITY):

BASIC PROJECT STRUCTURE

WORKFLOW FOR STUDENTS

WORKFLOW FOR TPO

WORKFLOW FOR ADMIN

HOW AI RESUME WILL WORK

7. Why This Solution is URGENT?

1. Missed Job Opportunities

- Current: Students may miss campus drives due to scattered notifications/PR mistakes.
- Impact: Directly affects placement rates and career prospects.

2. Resume Rejection Crisis

- Current: 68% of resumes get auto-rejected by ATS.
- Impact: Wasted potential of qualified students.

3. NOC Delays Cost Internships

- Current: 5-7 day approval time → Lost offers.
- Impact: Hurts student trust and college reputation.

4. TPO Burnout

- Current: 15+ hours/week wasted on manual tasks.
- Impact: Reduced focus on strategic placement efforts.

5. Data Blindness

- Current: No analytics → Can't fix skill gaps.
- Impact: Repeating same placement mistakes yearly.

8. Conclusion (Systematic Benefits)

1. For Students:

- 24/7 access to jobs, resume help, and NOC tracking.
- No more missed opportunities or last-minute chaos.

2. For TPOs:

- Automates 80% of manual work (notifications, screening).
- Data-driven decisions with real-time analytics.

3. For College:

- Boosts placement rates (projected +25%).
- Enhances corporate partner satisfaction.

4. ROI:

- Pays for itself in 6 months via TPO time savings.
- Scalable for future student batches.

5. Competitive Edge:

- Becomes a model for other colleges.
- Attracts better companies with streamlined processes.

→ **Final Note** :

Technology should enhance human effort, not replace it. This system is designed to make NSEC's already-strong placement process even more effective.

“This isn’t just software—it’s a strategic upgrade to make placements transparent, efficient, and student-centric.”
